

WISDOM & CHANCE TCG

BUSINESS PLAN v7.0

Legraphics Gaming Division

A division of Legraphics — Family-Owned Graphic Design Business (Est. 30+ Years)

Investment & Crowdfunding Prospectus

April 2026

CONFIDENTIAL

Prepared by Jason Myers, Founder & Division Head

For potential investors, crowdfunding backers, and strategic partners

14. Risk Analysis & Mitigation
15. Appendix: Technical Architecture

1. EXECUTIVE SUMMARY

Wisdom & Chance TCG is a digital trading card game that combines strategic deck-building with elemental combat mechanics. The game features five elemental factions — Fire, Water, Earth, Air, and Nature — with a planned first set of 100 unique cards and 5 Commanders (50 cards and all 5 Commanders built so far), each with specialized abilities that create deep strategic gameplay.

What makes this project extraordinary is how it was built: Jason Myers, heading the new Legraphics Gaming Division (an expansion of Legraphics, a family-owned graphic design business with 30+ years of history), has single-handedly created a product that would traditionally require a team of 4–6 engineers and \$320,000–\$900,000 in development costs — for approximately \$400 in Replit subscription fees. Including a \$50,000/year founder salary and Replit platform costs, the entire operation runs on approximately \$4,209–\$4,237 per month in fixed costs — a fraction of what any competing TCG spends on a single developer.

Key milestones achieved:

- Fully functional web application live at wisdom-and-chance-2.replit.app
- Fully functional mobile application running in Expo Go (iOS/Android)
- Unified monorepo architecture — web and mobile share one Express server and PostgreSQL database
- 146 API endpoints powering cards, decks, commanders, game engine, social features, economy, and payments
- Server-side game engine with real-time WebSocket multiplayer
- ~48,000 lines of production code across server, web client, and mobile app
- AI-powered deck suggestions using Google Gemini integration
- Stripe and PayPal payment integrations for web; ready for mobile in-app purchases
- Social system with friends, messaging, leaderboards, achievements, and daily challenges

Total monthly fixed operating costs including founder compensation are approximately \$4,209–\$4,237 (\$50,000/year founder salary + Replit platform + services), compared to Hearthstone's estimated \$15–\$20 million per year in operating costs. This extreme capital efficiency means profitability can be achieved with approximately 500–550 paying users per month.

The project is seeking \$25,000–\$50,000 in funding to cover 6–12 months of founder salary, marketing, app store fees, AI image generation for professional card artwork, and growth capital.

2. FOUNDER & LEGRAPHICS GAMING DIVISION

Jason Myers — Founder & Division Head

Jason Myers is an avid game enthusiast and storyteller who has spent years immersed in trading card games, strategy games, and interactive storytelling. As the founder and head of the Legraphics Gaming Division, Jason brings a unique combination of creative vision, design heritage, and hands-on technical execution to Wisdom & Chance TCG.

Jason serves as sole developer, product designer, artist, marketer, and project manager. All code — server, web client, and mobile app — has been written exclusively on Replit using AI-assisted

development tools (Replit Agent), averaging 40 hours per week of development time. This approach has enabled one person to build what would traditionally require a team of 4–6 engineers over 12+ months.

Legraphics — A Family Legacy of Design (30+ Years)

Wisdom & Chance TCG is not a random indie project from an unknown developer — it is the first venture of the Legraphics Gaming Division, a new arm of Legraphics, a family-owned graphic design business with more than 30 years of history. For three decades, Legraphics has served clients with professional design, branding, and visual communication services, building a reputation for quality craftsmanship and creative excellence.

The gaming division leverages this deep design DNA in every aspect of the product: from the elemental card frame aesthetics and UI/UX design to the branding, marketing materials, and this very business plan. Legraphics' 30+ years of design expertise give Wisdom & Chance a visual polish and brand coherence that most indie games lack — because most indie developers don't have a family design business backing them.

Why Legraphics Gaming Division?

- Established business infrastructure — Legraphics is a real, operating business with 30+ years of history, not a startup from scratch
- Design heritage — Decades of professional graphic design experience directly informs card art direction, UI design, and brand identity
- Family stability — A family-owned business adds credibility and long-term commitment that solo indie devs and VC-backed startups often lack
- Cross-pollination — Gaming division benefits from Legraphics' existing client network, business tools, and operational knowledge
- Low overhead — Shared business infrastructure means the gaming division doesn't need separate legal, accounting, or administrative costs

How One Person Does It All

- Development: Replit Agent provides AI-assisted coding, debugging, and deployment — multiplying individual output by 5–10x
- Card Artwork: AI image generation + Legraphics design expertise create professional-quality card illustrations
- Marketing: Social media, community management, and content creation — all handled by Jason
- Operations: Replit's integrated platform handles hosting, database, deployments, and infrastructure automatically
- Business Strategy: Jason handles all planning, financial modeling, and investor relations, backed by Legraphics' 30+ years of business experience

Development Philosophy

All coding, deployment, database management, and infrastructure are handled through Replit. This eliminates the need for separate hosting providers, CI/CD pipelines, DevOps personnel, or local development environments. Replit's integrated platform provides version control, database hosting (PostgreSQL), deployment, secret management, and AI-assisted code generation — all in one browser-based environment.

This solo-operator model is not a limitation — it's a strategic advantage. With Jason drawing a \$50,000/

year salary and total fixed monthly costs of ~\$4,209–\$4,237, the project's burn rate is less than what most studios spend on a single junior developer. This enables the project to take calculated risks on features and marketing, and reach profitability with modest user traction.

3. PRODUCT DESCRIPTION

Core Game Mechanics

Wisdom & Chance TCG is built on a phase-based combat system:

- Draw Phase — Players draw cards from their deck simultaneously
- Deployment Phase — Players place cards face-down on the battlefield
- Combat Phase — Cards are revealed and power totals determine the round winner
- Calculation Phase — Damage is applied, traits trigger, Victory/Withdrawal Points are awarded

Each card has base power (1–10), an elemental affinity, and optional traits:

- Quick Strike — Deals direct damage before main combat
- Guardian — Absorbs incoming damage to protect HP
- Restoration — Heals the player's HP
- Care Package — Draws additional cards

Commanders add a strategic layer with unique abilities that cost Victory Points (VP) or Withdrawal Points (WP) to activate. Abilities include element buffs, direct damage, card cycling, deploy bonuses, enemy debuffs, and protective shields.

Web Application — Live & Operational

The web app (wisdom-and-chance-2.replit.app) includes:

- 29 pages: Home, Card Database, Deck Builder, Practice Mode, Multiplayer Lobby, Game Board, Shop, Profile, Analytics, Leaderboard, Achievements, Daily Challenges, Friends, Messaging, Rules, Lore, Tutorial, Live Matches, Season Pass, Pack Opening, Admin Tools, and more
- Real-time multiplayer via WebSocket with reconnection handling
- AI opponents (Easy/Medium/Hard) powered by a server-side game engine
- Stripe and PayPal payment processing (currently in beta mode)
- Admin dashboards for card art management, user management, and image database
- Google Gemini AI-powered deck suggestions

Mobile Application — Functional in Expo Go

The React Native / Expo mobile app includes:

- 27 screens across 5 tab sections (Home, Cards, Decks, Social, More)
- Full card browsing with element-themed card frames and static artwork
- Deck management — create, edit, delete, import/export via share codes
- Practice battles against AI with the same game engine as web
- PvP multiplayer game board with real-time WebSocket sync
- Social features — friends list, friend requests, direct messaging
- Player profile, match history, analytics, achievements, daily challenges
- Game rules, lore archives, interactive tutorial
- JWT-based authentication with secure token storage

Remaining Mobile Work

The mobile app is approximately 80–85% complete. Remaining items:

- In-app purchase integration (Apple IAP + Google Play Billing)
- Push notification system
- App Store / Google Play submission and review process
- AI-generated professional card artwork integration
- Performance optimization and final QA pass

4. THE PROTOTYPE ADVANTAGE — WHY BACKERS SHOULD BE EXCITED

A Playable Game, Not Just a Promise

Most crowdfunding campaigns for video games and card games launch with nothing more than concept art, a trailer, and a vision. Backers are asked to fund a dream — with no guarantee the team can deliver. The history of gaming Kickstarters is littered with failed projects that took millions in funding and never shipped a playable product.

Wisdom & Chance TCG is fundamentally different. The game is already built and playable — right now. Backers don’t have to imagine what the game might look like; they can open a browser, visit wisdom-and-chance-2.replit.app, and play it today. They can build decks, battle AI opponents, challenge friends in real-time multiplayer, earn achievements, and experience the full gameplay loop.

This is not a prototype in the traditional sense of a rough mockup — it’s a functional, feature-complete application with 29 web pages, 27 mobile screens, real-time multiplayer, a server-side game engine, payment processing, social features, and a complete economy system.

What This Prototype Would Normally Cost

To appreciate the value that already exists, consider what it would cost to build this from scratch using traditional methods:

Development Approach	Estimated Cost
Traditional studio (4–6 engineers × 12 months)	\$320,000–\$900,000
Freelance team (3–4 devs × 12 months)	\$150,000–\$300,000
Offshore development team	\$80,000–\$150,000
Single senior developer (12 months)	\$100,000–\$180,000
Actual cost (Replit AI-assisted, 1 person)	~\$400

The ~\$400 actual cost represents approximately 12–18 months of Replit subscription fees (\$20/month). The cost savings compared to even the cheapest traditional approach is over 99.7%. This is the power of AI-assisted development: one person with the right tools can produce

what previously required a team and six figures of investment.

What “Playable Now” Means for Backers

Having a functional prototype dramatically reduces backer risk and increases campaign credibility:

- Zero delivery risk — The game exists and works. Backers aren’t funding a concept; they’re funding the growth of a working product
- Try before you pledge — Any potential backer can play the game for free on the web before deciding to support
- Proven technical capability — The founder has already demonstrated the ability to build and ship a complex product
- Transparent development — The codebase, the live site, and the mobile app are all visible proof of progress
- Immediate beta access — Backers who pledge \$10+ receive a one-time passcode for instant beta access to the full game

The \$400 Prototype vs. The Industry Standard

In the gaming industry, a “prototype” typically refers to a rough vertical slice that demonstrates core mechanics — usually costing \$50,000–\$200,000 and taking 3–6 months to build. Wisdom & Chance has gone far beyond a prototype: it’s a near-complete product with multiplayer, social features, economy, payments, and both web and mobile versions. All built for roughly the price of a nice dinner out.

This extreme capital efficiency is what makes the Legraphics Gaming Division’s approach so compelling for investors and backers: the hardest part — building the product — is already done. Funding now goes toward art, polish, marketing, and growth, not toward hoping a team can write the code.

5. MARKET ANALYSIS

Digital TCG Market Size

The global digital trading card game market was valued at approximately \$8.9 billion in 2024 and is projected to reach \$15.2 billion by 2029, growing at a CAGR of 11.3%. Key drivers include mobile gaming growth, the rise of competitive esports, and increasing digital collectible adoption.

Competitive Landscape

Major competitors include:

- Hearthstone (Blizzard) — Established leader, 30M+ monthly players
- Magic: The Gathering Arena — Premium brand, complex mechanics
- Yu-Gi-Oh! Master Duel — Massive IP, 50M+ downloads
- Pokémon TCG Live — Brand power, younger demographic
- Marvel Snap — Fast gameplay, 20M+ downloads in first year

Wisdom & Chance Differentiation

Wisdom & Chance TCG differentiates through:

- Simultaneous play — Both players act each phase, eliminating passive waiting
- Elemental buff/debuff system — Cards interact across elements for strategic depth
- Commander abilities — Unique strategic abilities that create asymmetric gameplay
- Accessible complexity — Easy to learn (deploy and compare power) but deep strategy
- Cross-platform play — Web and mobile players share the same game world
- Solo-developed indie story — Compelling narrative for community building
- Extreme capital efficiency — Near-zero operating costs enable aggressive pricing and long-term sustainability

Target Audience

- Primary: TCG players aged 18–35 who enjoy strategic depth without excessive complexity
- Secondary: Mobile gamers looking for quick competitive matches (5–10 minutes)
- Tertiary: Content creators and streamers in the indie game space

6. COMPETITIVE ANALYSIS — HEARTHSTONE CASE STUDY

Hearthstone, developed by Blizzard Entertainment, is the most commercially successful digital TCG in history. Analyzing its cost structure and profitability provides valuable context for understanding Wisdom & Chance’s positioning and potential.

Hearthstone Development & Operating Costs

Metric	Hearthstone (Estimated)
Initial Development Cost	\$30–\$50 million

Development Time	~5 years (2008–2014 launch)
Peak Team Size	100–150 developers, artists, designers
Annual Operating Cost (est.)	\$15–\$20 million/year
Peak Annual Revenue (2017)	\$~500 million
Recent Annual Revenue (2023–25)	\$200–\$300 million
Lifetime Revenue (est.)	\$2.5–\$3.5 billion
Profit Margin (est.)	60–75% at peak
Cost Per Card Created	\$50,000–\$100,000+ (art, design, balance, QA)
Monthly Server/Infrastructure	\$500,000–\$1,000,000+

Sources: Blizzard/Activision annual reports, industry analyst estimates (SuperData, Newzoo), public developer interviews.

Wisdom & Chance vs. Hearthstone — Cost Comparison

Metric	Hearthstone	Wisdom & Chance
Development Cost	\$30–\$50 million	~\$300 (Replit sub)
Development Time	5+ years	~12 months
Team Size	100–150 people	1 person
Monthly Operating Cost	\$1.2–\$1.7 million	~\$4,230 (incl. salary)
Cost Per Card	\$50,000–\$100,000+	~\$0.50 (AI generation)
Infrastructure	Custom data centers	Replit managed hosting
Break-even Users Needed	~500,000+ MAU	~500–550 paying users
Profit at 1,000 Payers	Still losing money	\$4,000–\$6,000/month

Key Takeaway

Hearthstone needed approximately \$30–\$50 million in development costs and 500,000+ monthly active users before it became profitable. Wisdom & Chance, with monthly costs of ~\$4,230 (including the founder's \$50,000/year salary), can achieve profitability with approximately 500–550 paying users. This 1,000x difference in cost structure means that even

capturing a tiny fraction of Hearthstone's market would generate substantial profit.

While Hearthstone benefits from Blizzard's massive brand, IP library, and marketing budget, Wisdom & Chance benefits from a single compensated founder, AI-multiplied productivity, and a burn rate lower than most studios' monthly coffee budget. In a worst-case scenario where user growth is slow, the project continues at minimal cost until traction builds — an option unavailable to any venture-funded competitor.

7. REVENUE MODEL & PRODUCT CATALOG

Web Revenue Streams (Stripe + PayPal)

The shop uses a simple, transparent quantity-based pricing model. Instead of preset bundles, players select how many packs they want and the price scales linearly — no hidden markups, no confusing tiers:

Card Pack Pricing — Quantity Selector Model

Base unit: 1 Pack = 5 random cards from the current set. Price: \$2.00 USD or 200 Gold.

Players choose their quantity and the total updates automatically:

Quantity	USD Price	Gold Price	Cards Received
1 Pack	\$2.00	200 Gold	5 cards
2 Packs	\$4.00	400 Gold	10 cards
3 Packs	\$6.00	600 Gold	15 cards
5 Packs	\$10.00	1,000 Gold	25 cards
10 Packs	\$20.00	2,000 Gold	50 cards
25 Packs	\$50.00	5,000 Gold	125 cards

Formula: Total = Quantity × \$2.00 (or Quantity × 200 Gold). No bulk discounts — every pack costs the same whether you buy 1 or 100. This keeps pricing fair, simple, and easy to understand for all players.

In-Game Gold Currency

Gold can be earned through gameplay (daily challenges, achievements, wins) or purchased directly:

Gold Amount	USD Price	Pack Equivalent
200 Gold	\$2.00	1 Pack
500 Gold	\$5.00	2.5 Packs
1,000 Gold	\$10.00	5 Packs
2,000 Gold	\$20.00	10 Packs
5,000 Gold	\$50.00	25 Packs

Gold maintains a fixed 1:1 exchange rate with USD (\$1 = 100 Gold). Players can use gold to buy packs, cosmetics, and tournament entry fees.

Additional Shop Products

Product	Price	Category
Season Pass	\$9.99/season	Subscription
Battle Pass Premium	\$14.99/season	Subscription

Cosmetic Card Backs	\$2.99 each	Cosmetic
---------------------	-------------	----------

Mobile Revenue Streams (Planned)

Mobile in-app purchases will mirror the web catalog with platform-specific considerations:

- Apple App Store — 30% commission on all transactions (15% for small business program if eligible)
- Google Play — 15% commission on first \$1M, then 30%
- Pricing may be adjusted upward on mobile to account for platform fees
- Subscription products (Season Pass, Battle Pass) will use platform-native recurring billing

Revenue Model Summary

Revenue comes from four primary channels:

- Card pack sales — \$2/pack with quantity selector; players buy as many as they want
- In-game currency — Gold purchased with USD or earned through gameplay, used for packs, cosmetics, and entry fees
- Season/Battle Pass — Recurring seasonal subscriptions with exclusive rewards
- Cosmetic items — Card backs, board

themes, and visual customizations

8. COST ANALYSIS — SOLO OPERATOR MODEL

Development Value Already Created

The following represents work already completed, demonstrating extreme capital efficiency:

Item	Equivalent Market Value
Server-side development (10,865 lines)	\$35,000–\$50,000
Web client development (22,791 lines)	\$40,000–\$55,000
Mobile app development (12,718 lines)	\$30,000–\$45,000
Game engine & combat system	\$15,000–\$20,000
WebSocket multiplayer system	\$10,000–\$15,000
Payment integration (Stripe + PayPal)	\$5,000–\$8,000
Database schema & API design (146 endpoints)	\$12,000–\$18,000
Total equivalent development value	\$147,000–\$211,000

All of this was built by a single founder on Replit. Actual out-of-pocket development cost: approximately \$300 in Replit subscription fees over 12 months.

Ongoing Monthly Costs — Primary: Founder Compensation

The founder draws a salary of \$50,000 per year (\$4,167/month) as the sole operator of the business. This covers all development, design, marketing, operations, and business management:

Compensation	Monthly Cost
Founder Salary (full-time, 40+ hrs/week)	\$4,167/month
Total Founder Compensation	\$4,167/month

This salary is below market rate for a single full-stack developer (\$80K–\$150K/year), let alone a combined developer + designer + product manager + marketer role. It reflects the founder's commitment to keeping costs lean while ensuring personal sustainability.

Ongoing Monthly Costs — Secondary: Replit Platform (40 hrs/week usage)

The founder uses Replit as the complete development, AI, and hosting platform, averaging 40+ hours per week of active development with AI Agent assistance. Replit's \$20/month plan provides AI Agent access, cloud development environments, and deployment infrastructure:

Replit Expense	Monthly Cost
Replit Subscription (\$20/mo plan w/ AI Agent)	\$20/month
Replit Deployments (production hosting)	\$7–\$20/month
PostgreSQL Database Hosting	Included in plan
AI Agent Compute (~160 hrs/month)	Included in plan
Total Replit Costs	\$27–\$40/month

Weekly Replit Cost Breakdown

At 40 hours per week of development, here is the effective weekly cost of operating the entire tech stack:

Weekly Expense	Cost/Week
Replit Subscription (\$20/mo ÷ 4.33 weeks)	\$4.62/week

Replit Deployments (\$7–\$20/mo ÷ 4.33)	\$1.62–\$4.62/week
AI Agent Usage (40 hrs @ \$0/hr additional)	\$0 (included)
Total Weekly Replit Cost	\$6.24–\$9.24/week
Effective Cost Per Dev Hour	\$0.16–\$0.23/hour

For context: a single freelance developer costs \$50–\$150/hour. At 40 hours/week, that would be \$2,000–\$6,000/week. The founder’s entire weekly Replit cost (\$6–\$9) is less than the price of a single lunch.

AI Agent Work Hours — Value Estimate

The Replit AI Agent acts as a virtual engineering team, providing code generation, debugging, refactoring, and deployment assistance. Here is the estimated market value of the AI compute consumed:

AI Agent Metric	Value
Weekly AI-assisted dev hours	40 hours
Monthly AI-assisted dev hours	~160 hours
Annual AI-assisted dev hours	~2,080 hours
Market rate for equivalent dev work	\$50–\$150/hour
Monthly value of AI output	\$8,000–\$24,000
Annual value of AI output	\$104,000–\$312,000
Actual monthly cost for AI access	\$20 (subscription)
Cost savings vs. hiring equivalent	99.75–99.92%

This is the core economic advantage of the solo operator model: the founder leverages AI to produce output equivalent to a small engineering team, at a fraction of one percent of the cost.

Server Scaling Costs — Projected Replit Deployment Costs by User Traffic

As the game attracts more players, server costs through Replit Deployments will increase based on compute usage, database connections, and WebSocket traffic. Estimated scaling costs:

Monthly Active Users	Est. Server Cost	DB Cost	Total Hosting
100–500 MAU	\$7–\$10/mo	Included	\$7–\$10/mo
500–1,000 MAU	\$10–\$15/mo	Included	\$10–\$15/mo
1,000–5,000 MAU	\$15–\$30/mo	Included	\$15–\$30/mo
5,000–10,000 MAU	\$30–\$60/mo	\$0–\$10/mo	\$30–\$70/mo
10,000–20,000 MAU	\$60–\$120/mo	\$10–\$25/mo	\$70–\$145/mo
20,000–50,000 MAU	\$120–\$250/mo	\$25–\$50/mo	\$145–\$300/mo

Even at 50,000 monthly active users, estimated hosting costs remain under \$300/month — compared to \$500,000–\$1,000,000+/month for Hearthstone's custom infrastructure. Replit's auto-scaling deployment model means costs grow linearly with usage rather than requiring large upfront infrastructure investment.

Important: These server costs scale with revenue. At 20,000 MAU with 6% conversion and \$20 average revenue per payer, monthly revenue would be ~\$24,000 against ~\$145 in hosting costs — a hosting cost ratio under 0.6%.

Ongoing Costs — Platform & Transaction Fees

These costs are variable and only apply when revenue is generated —

they scale proportionally
with income:

Platform	Fee Structure
Stripe (web payments)	2.9% + \$0.30 per transaction
PayPal (web payments)	2.9% + \$0.30 per transaction
Apple App Store (mobile)	30% commission (15% if <\$1M/year)
Google Play Store (mobile)	15% on first \$1M, then 30%
State/Federal Business Taxes	Varies by jurisdiction

At projected Year 1 revenue levels (~\$25,000), total platform fees would be approximately \$2,500–\$5,000 depending on the channel mix between web (lower fees) and mobile (higher fees).

Ongoing Costs — Additional Services

Service	Cost
AI Image Generation (card art)	\$5–\$20/month
Domain Registration (via Replit)	~\$12/year (~\$1/month)
Apple Developer Account	\$99/year (~\$8.25/month)
Google Play Developer Account	\$25 one-time
Total Tertiary Costs	~\$15–\$30/month

Total Monthly Operating Cost Summary

Category	Monthly Cost
Founder Salary (\$50,000/year)	\$4,167
Replit Platform (40 hrs/week usage)	\$27–\$40
AI Image Generation + Domain + Dev Accounts	\$15–\$30
Platform/Transaction Fees (variable)	\$0–varies with revenue
Office/Equipment	\$0 (works from home)
Total Fixed Monthly Costs	\$4,209–\$4,237

Total annual fixed operating cost: ~\$50,508–\$50,844/year. Compare this

to the v5.0 business plan which excluded founder compensation entirely and still projected \$2,100–\$4,100/month with a hired creative team. The solo operator model with fair founder compensation still costs less per month than a single junior developer's salary at a traditional studio.

9. MARKETING & GROWTH STRATEGY

Pre-Launch (Current Phase)

- Build social media presence — Twitter/X, TikTok, Instagram, Reddit (r/cardgames, r/tcg)
- Content marketing — Dev logs, behind-the-scenes videos, card reveal campaigns
- Community building — Discord server for early testers and feedback
- Influencer outreach — TCG content creators on YouTube and Twitch
- Press coverage — Indie game publications, Replit community showcase
- "Solo developer built a full TCG" narrative — compelling story for press and social media

Launch Phase

- App Store Optimization (ASO) — Keyword research, screenshot optimization, localized descriptions
- Launch trailer — Created using AI video tools and gameplay capture
- Cross-promotion — Web players invited to download mobile; mobile players directed to web for full experience
- Crowdfunding backer exclusive content — Early access, exclusive card backs, founder badges
- Referral program — Invite friends,

earn in-game currency

Post-Launch Growth

- Competitive seasons — Monthly/quarterly ranked seasons with leaderboard prizes
- Tournament system — Community-organized and official tournaments
- Content updates — New cards, commanders, and seasonal events
- Streamer partnerships — Sponsored streams and tournament coverage
- Localization — Translate to Spanish, Portuguese, French, German, Japanese for global reach

10. CROWDFUNDING CAMPAIGN STRATEGY — KICKSTARTER + BACKERKIT

Platform Strategy: Kickstarter First, BackerKit After

The crowdfunding strategy uses a two-phase approach to maximize funding and ongoing revenue:

- Phase 1 — Kickstarter Campaign (30 days): Primary fundraising on Kickstarter, the largest platform for game projects with the most engaged backer community
- Phase 2 — BackerKit (ongoing after campaign): Late pledges, add-on purchases, backer surveys, and a permanent pre-order store that keeps revenue flowing after the Kickstarter ends

BackerKit extends the funding window indefinitely. Many successful game Kickstarters generate 15–25%

additional revenue through BackerKit late pledges after the main campaign closes. This is especially powerful for Wisdom & Chance because the game is already playable — late backers can try the game and pledge with confidence.

Campaign Goal

Base goal: \$25,000 — Covers 6 months of founder salary, app store fees, marketing launch, and AI image generation for all 100 cards + 5 commanders in the first set.

Stretch goals up to \$50,000 — 12 months founder salary runway, expanded marketing, tournament prize pool, localization, and head start on Set 2 development.

Note: Even with the founder's \$50,000/year salary included, this crowdfunding goal is still dramatically lower than traditional game projects (which typically seek \$100K–\$500K+). This makes the campaign far more likely to succeed and reduces backer risk.

Beta Access — \$10+ Pledge Unlock

All backers who pledge \$10 or more receive immediate beta access to the full game on both web and mobile. This is a major differentiator — backers don't have to wait months or years to play; they get access right away.

Beta Access Verification Flow:

- 1. Backer pledges \$10+ on Kickstarter (or BackerKit late pledge)
- 2. After pledge is confirmed, the system generates a unique one-time passcode
- 3. Passcode is emailed to the backer with instructions

- 4. Backer enters the passcode in the game (web or mobile) to verify their pledge
- 5. Account is permanently flagged as a Beta Backer with full access

This passcode system is simple, secure, and scalable. Each code is single-use and tied to the backer's email, preventing sharing or abuse. Beta Backers also receive a unique in-game badge and card back as a permanent mark of their early support.

Reward Tiers

Tier	Reward	Price
Supporter	Name in credits, digital thank-you card	\$5
Beta Backer	Beta access + 2 packs (\$4 value) + beta badge	\$10
Player	Beta access + 5 packs (\$10 value) + exclusive card back	\$15
Champion	Beta access + 15 packs (\$30) + Season Pass + founder badge	\$40
Commander	Beta access + 25 packs (\$50) + Battle Pass + Commander skin	\$65
Legend	Beta access + 50 packs (\$100) + all passes + name a card + VIP	\$125
Patron	Everything above + 1-hour strategy call + custom card design	\$250

All tiers at \$10 and above include beta access via one-time passcode. The Beta Backer tier is specifically designed as the entry point for players who want to play immediately at the lowest cost.

Campaign Timeline

Pre-campaign (4–6 weeks):

- Social media buildup across Twitter/X, TikTok, Instagram, Reddit
- Email list collection via landing page with early-bird signup incentives
- Press outreach to indie game publications and TCG community influencers

- Demo video showing live gameplay on web and mobile

Kickstarter Campaign (30 days):

- Launch with live gameplay demo — “play the game right now” as the headline

- Daily/weekly updates with development progress, card reveals, and community highlights

- Stretch goal reveals at key funding milestones to maintain momentum

- Cross-promotion between web game and campaign page

Post-Campaign — BackerKit (ongoing):

- Transition all backers to BackerKit for surveys, add-on purchases, and fulfillment

- Open BackerKit pre-order store for late pledges — same tiers as Kickstarter

- Late backers also receive beta access upon \$10+ pledge confirmation

- Add-on items: extra packs, cosmetic bundles, Season Pass upgrades

- BackerKit store remains open indefinitely, providing a continuous revenue stream

Post-campaign fulfillment within 60 days of campaign close. Beta access passcodes are delivered immediately upon pledge confirmation, not at fulfillment.

11. DEVELOPMENT ROADMAP

Phase 1: Completed (Q1 2025 – Q1 2026)

- Core game engine with 5 elements, 50 cards built so far (of 100 planned for Set 1), 5 commanders
- Full web application with 29 pages and complete gameplay loop
- Server-side multiplayer game engine with WebSocket real-time sync
- AI opponents (Easy/Medium/Hard difficulty)
- Social system (friends, messaging, leaderboards, achievements)
- Payment integration (Stripe + PayPal) on web
- Mobile app (React Native/Expo) with 27 screens — functional in Expo Go
- Unified monorepo architecture sharing one server and database

Phase 2: Complete Set 1 & App Store Launch (Q2–Q3 2026)

- Complete remaining 50 cards to finish Set 1 (100 total cards + 5 Commanders)
- Generate professional card artwork using AI image generation tools for all 105 cards
- Integrate Apple IAP and Google Play Billing in mobile app
- Push notification system for mobile
- Final QA pass and performance optimization
- Apple App Store and Google Play submission
- Launch crowdfunding campaign

Phase 3: Growth & Season 1 (Q3–Q4 2026)

- Season 1 launch with ranked play, seasonal rewards, and battle pass
- Tournament system — in-game organized competitive play
- Social features expansion — guilds/clans, spectator mode improvements
- Content creator program — streamer tools and referral integration
- Begin development of Set 2 (100 new cards, targeting Q1 2027 release)

Phase 4: Set 2 Launch & Expansion (Q1–Q2 2027)

- Release Set 2 — 100 new cards with new mechanics and strategies
- New element or card mechanics (e.g., dual-element cards)
- Localization — 5+ languages
- Draft/Arena game mode
- Physical merchandise tie-ins (optional, dependent on revenue)
- Esports integration — sponsored tournaments with prize pools

Card Set Release Schedule

New 100-card sets will be released every 6 months following this cadence:

- Set 1 (Launch): 100 cards + 5 Commanders — Q2/Q3 2026
- Set 2: 100 new cards — Q1 2027
- Set 3: 100 new cards — Q3 2027

Set release frequency will be re-evaluated in late 2027 based on player engagement data, revenue trends, and community feedback. The cadence may increase, decrease, or shift to smaller/larger sets depending on what the data shows.

12. FINANCIAL PROJECTIONS

Conservative projections assume gradual user acquisition post-launch with the solo operator cost structure including \$50,000/year founder salary. All figures are in USD. Monthly fixed costs are ~\$4,230 (\$4,167 salary + ~\$63 Replit/services). Pack pricing is \$2/pack with an average of 3–5 packs per purchase.

Average Revenue Per Paying User (ARPPU) derivation: At \$2/pack, a payer buying 4–5 packs/month spends \$8–\$10. With Season Pass (\$9.99) and cosmetic purchases factored in, ARPPU grows from ~\$8 in Q1 to ~\$15 by Q4 Year 1 as engaged players increase spending. Year 2 ARPPU rises further (\$15–\$22) as new card sets drive repeat purchases and the Battle Pass adds a second subscription tier.

Year 1 Post-Launch Quarterly Projections

Metric	Q1	Q2	Q3	Q4
Monthly Active Users	500	1,500	3,000	5,000
Paying Users (5%)	25	75	150	250
Avg Revenue/Payer	\$8	\$10	\$12	\$15
Quarterly Revenue	\$600	\$2,250	\$5,400	\$11,250
Fixed Costs (3 mo)	\$12,690	\$12,690	\$12,690	\$12,690
Platform Fees (~15%)	\$90	\$338	\$810	\$1,688
Total Costs	\$12,780	\$13,028	\$13,500	\$14,378
Net Income	-\$12,180	-\$10,778	-\$8,100	-\$3,128

Year 1 total projected revenue: ~\$19,500.
Year 1 total costs: ~\$53,686. Net: - \$34,186.

The project operates at a loss in Year 1 as user base grows, but costs are entirely predictable and sustainable. The founder's salary ensures personal financial stability while building the business. Note that losses narrow each quarter as revenue

grows.

Year 2 Projections (Growth Phase)

Metric	Q1	Q2	Q3	Q4
Monthly Active Users	7,000	10,000	15,000	20,000
Paying Users (6%)	420	600	900	1,200
Avg Revenue/Payer	\$15	\$18	\$20	\$22
Quarterly Revenue	\$18,900	\$32,400	\$54,000	\$79,200
Fixed Costs (3 mo)	\$12,690	\$12,690	\$12,690	\$12,690
Platform Fees (~18%)	\$3,402	\$5,832	\$9,720	\$14,256
Total Costs	\$16,092	\$18,522	\$22,410	\$26,946
Net Income	+\$2,808	+\$13,878	+\$31,590	+\$52,254

Year 2 total projected revenue: ~\$184,500.
Year 2 total costs: ~\$83,970. Net profit: +\$100,530.

Break-even occurs in Q1 of Year 2. By Q4, the project generates \$52,254 quarterly profit — more than covering the founder's annual salary in a single quarter.

Profitability Threshold Analysis

With monthly fixed costs of ~\$4,230 (including founder salary) and average revenue per payer of \$10:

- Break-even:
~500 paying users

per month (after
~15% platform fees)
• \$1,000/month
profit above salary:
~620 paying users
• \$5,000/month
profit above salary:
~1,090 paying users
• \$10,000/month
profit above salary:
~1,680 paying users

For comparison, Hearthstone needed an estimated 500,000+ monthly active users and \$15–\$20M/year in operating costs. Wisdom & Chance needs approximately 500 paying users to fully cover the founder's salary, Replit costs, and all platform fees.

13. FUNDING REQUIREMENTS & USE OF FUNDS

Total Funding
Sought: \$25,000
– \$50,000

Funding covers the founder's salary runway during the critical growth phase, plus marketing and launch costs. Even with founder

compensation included, the high end (\$50,000) is comparable to v5.0's low end (\$45,000), while providing significantly more runway due to the elimination of all other team costs.

Use of Funds	Minimum	Maximum
Founder Salary Runway (6–12 months)	\$12,500	\$25,000
Marketing & User Acquisition	\$5,000	\$10,000
AI Card Art Generation (100 cards + 5 commanders)	\$400	\$1,000
App Store Submission Fees	\$125	\$125
Crowdfunding Campaign Costs (8–10%)	\$2,000	\$5,000
Launch Trailer (AI-assisted production)	\$200	\$500
Tournament Prize Pool (Season 1)	\$500	\$2,000
Replit Operating Reserve (12 months)	\$500	\$600
Contingency / Growth Capital	\$3,775	\$5,775
Total	\$25,000	\$50,000

Why Funding Amounts Are Still Low

Traditional game studios need funding for: multiple developer salaries (\$80K–\$150K/year each), office space (\$2K–\$10K/month), equipment (\$5K–\$10K per developer), health insurance, HR, legal, accounting, and more. Wisdom & Chance replaces all of this with a single founder at \$50K/year and ~\$63/month in platform costs.

The majority of funding

goes to founder salary runway and marketing. Once the project reaches ~500 paying users/month, it becomes fully self-sustaining. The project can and will continue development regardless of funding outcome — the founder is committed to the product.

Return on Investment

Investors would receive returns through a revenue-sharing agreement. Proposed structure: investors receive 15–20% of gross revenue until 2x their investment is returned, then 5% of gross revenue for an additional 3 years. Exact terms are negotiable and will be formalized in a separate investment agreement.

Why Now?

The product is substantially built — over \$150,000 in estimated development value has been created with under \$300 in actual costs. Funding now covers the founder's salary runway during the critical growth phase and accelerates the last mile: professional art, app store launch, and marketing. The risk-reward ratio is exceptionally favorable because the core product already

exists, is functional, and the ongoing cost to maintain it is under \$4,250/month including the founder's salary.

14. RISK ANALYSIS & MITIGATION

Risk: App Store Rejection

Impact: Apple or Google may reject the app for policy violations

Mitigation: Pre-review guidelines compliance check; maintain web version as fallback; iterate on feedback

Risk: Platform Fee Impact

Impact: 30% app store commission reduces mobile margins

Mitigation: Price mobile products higher; emphasize web purchases; qualify for Apple Small Business Program (15%); Google's 15% on first \$1M

Risk: Low User Acquisition

Impact: Difficulty reaching target audience

Mitigation: Multi-channel marketing; community-first approach; content creator partnerships; organic SEO/ASO; near-zero burn rate means we can wait for traction

Risk: Technical Scaling

Impact: Server performance under high player load

Mitigation: Replit auto-scaling; database optimization; CDN for static assets; graceful degradation

Risk: Competition

Impact: Established TCGs dominate market share

Mitigation: Focus on niche (simultaneous play, accessibility); indie community appeal; unique mechanics differentiation; cost structure means even tiny market share is profitable

Risk: Expo/React Native Compatibility

Impact: Framework updates may break mobile app

Mitigation: Pin dependency versions; maintain expo-router patches; test on each SDK update before deploying

Risk: Key Person Risk

Impact: Single developer dependency

Mitigation: Comprehensive codebase documentation; Replit AI can assist new developers; modular architecture enables onboarding; the AI-assisted model means a new developer can be productive quickly

Risk: Crowdfunding Failure

Impact: Campaign does not reach funding goal

Mitigation: Set achievable base goal (\$25K vs industry-typical \$100K–\$500K+); build pre-campaign audience; web app generates revenue independently; project continues regardless of campaign outcome

15. APPENDIX: TECHNICAL ARCHITECTURE

Monorepo Structure

The project uses a unified monorepo with shared types between web and mobile:

```
/
% % % server/                # Express.js backend (10,865 lines)
%   % % % routes.ts          # 89 core API endpoints
%   % % % multiplayerRoutes.ts # 29 multiplayer endpoints
%   % % % paymentRoutes.ts   # 13 payment endpoints
%   % % % mobileAuth.ts      # 3 mobile auth endpoints
%   % % % websocket.ts       # Real-time multiplayer (702 lines)
%   % % % gameEngine.ts      # Server-side combat engine (1,200 lines)
%   % % % storage.ts         # Database interface (854 lines)
%   % % % replit_integrations/ # Auth, chat, image routes
% % % client/                # React + Vite web app (22,791 lines)
%   % % % src/pages/         # 29 web pages
% % % mobile/                # React Native + Expo (12,718 lines)
%   % % % app/               # 27 screens (expo-router)
%   % % % components/        # 6 shared components
%   % % % lib/                # API client, game engine, WebSocket
% % % shared/                # Shared TypeScript types & schemas (1,386 lines)
%   % % % schema.ts          # Zod schemas & game constants
%   % % % models/            # 5 model modules
% % % package.json           # Monorepo root
```

Technology Stack

- Backend: Node.js + Express.js + TypeScript
- Database: PostgreSQL with Drizzle ORM
- Web Frontend: React 18 + Vite + Tailwind CSS + shadcn/ui
- Mobile: React Native + Expo SDK 53 + expo-router
- Real-time: WebSocket (ws library) with JWT authentication
- Payments: Stripe SDK + PayPal Server SDK
- AI: Google Gemini (deck suggestions)
- Auth: Replit OpenID Connect (web) + JWT tokens (mobile)

- Hosting: Replit Deployments (auto-scaling)

API Endpoint Summary

146 total HTTP endpoints across 9 route files:

- routes.ts — 89 endpoints
- paymentRoutes.ts — 13 endpoints
- multiplayerRoutes.ts — 29 endpoints
- mobileAuth.ts — 3 endpoints
- apiDocs.ts — 1 endpoints
- auth/routes.ts — 1 endpoints
- auth/replitAuth.ts — 4 endpoints
- chat/routes.ts — 5 endpoints
- image/routes.ts — 1 endpoints

Key Metrics

- Total production code: 47,760 lines
- API endpoints: 146
- Web pages: 29
- Mobile screens: 27
- Shared type models: 5 modules
- Game elements: 5 (Fire, Water, Earth, Air, Nature)
- Unique cards: 50 built / 100 planned in Set 1
- Commanders: 5
- Commander abilities: 15+ unique effects
- Game modes: Standard (2/2) and Accelerated (3/3)
- AI difficulty levels: Easy, Medium, Hard

Thank You

Wisdom & Chance TCG

Built by one person. Backed by 30+ years of design heritage.
