

# Wisdom & Chance TCG

## Mobile AI Agent Data Request

---

Questions for the Mobile App AI Agent  
Answers needed for the Business Plan cost estimate

Date: April 2026

## Instructions

Copy and paste the following message to the mobile app AI agent. The answers will be used to create accurate cost estimates for the business plan covering both the web and mobile app.

--- BEGIN MESSAGE TO MOBILE AI AGENT ---

I need the following information about the Wisdom & Chance TCG mobile app for our business plan. Please answer each question as specifically as possible with numbers, percentages, and details.

## Section 1: Current Progress

- 
- Q1.** What is the overall completion percentage of the mobile app?  
*(e.g., "65% complete" or "4 of 7 phases done")*
- Q2.** Which screens/features are fully built and functional right now? List them.  
*(e.g., "Login, Card Browser, Deck Builder, Shop, Collection are done")*
- Q3.** Which screens/features are partially built? What remains on each?  
*(e.g., "Battle Pass screen is 80% done, missing premium track UI")*
- Q4.** Which screens/features have NOT been started yet? List them.  
*(e.g., "Multiplayer game board, Spectator mode, Friend messaging")*

## Section 2: Technical Details

- 
- Q5.** What framework/language is the mobile app built with?  
*(e.g., "React Native + TypeScript" or "Flutter + Dart" or "Expo")*
- Q6.** Is the mobile app being developed on Replit? If not, what platform?  
*We need to know if all development can stay on Replit as planned.*
- Q7.** How many total screens/pages exist in the app currently?  
*(e.g., "12 screens built, 8 more planned")*
- Q8.** How many of the server's 70+ API endpoints does the mobile app currently consume?  
*(e.g., "35 of 75 endpoints are wired up")*
- Q9.** Are there any third-party SDKs, services, or paid dependencies the mobile app uses beyond what the server provides?  
*(e.g., "Firebase for push notifications", "RevenueCat for IAP", etc.)*

## Section 3: Remaining Work Estimate

- 
- Q10.** How many estimated development hours remain to reach a fully functional v1.0 mobile app? Break it down by major feature area if possible.  
*(e.g., "Multiplayer: 40hrs, Social: 20hrs, Polish: 30hrs = ~90hrs total")*
- Q11.** What are the hardest/riskiest remaining features to build?  
*(e.g., "WebSocket multiplayer game board is the biggest challenge")*
- Q12.** Are there any known bugs, technical debt, or architectural issues that need to be addressed before launch?

## Section 4: Deployment & Costs

- 
- Q13.** What is the plan for app store deployment? (Apple App Store, Google Play, or both?)
- Q14.** Are there any annual costs for the mobile app specifically? (Apple Developer \$99/yr, Google Play \$25 one-time, etc.)
- Q15.** Does the mobile app require any separate hosting or backend beyond the existing web server?  
*The web server is on Replit. Does the mobile app need anything else?*
- Q16.** What is the estimated app size (MB) and are there any large assets that need to be downloaded?

## Section 5: Post-Launch Maintenance

- 
- Q17.** After v1.0 launch, what is the estimated monthly maintenance effort in hours?  
*(e.g., "~10 hrs/month for bug fixes, OS updates, and minor features")*
- Q18.** How often will the app need updates for iOS/Android OS compatibility?
- Q19.** Are there any recurring costs specific to the mobile app (push notification service, analytics, crash reporting)?

--- END MESSAGE TO MOBILE AI AGENT ---

Once you have the answers, bring them back to the web app agent (me) and I will incorporate them into the final business plan with accurate cost estimates for both apps.
